

Cadan Assistive Technologies is happy to partner once again with PATINS as a Featured Vendor!

Cadan has been involved in Assistive Technology consulting for over 30 years. Jim Rogers started the company Technology for Education which was acquired by Cadan Technologies (an IT consulting company) six years ago. Our primary goal continues to be partnering with our clients to determine the best Assistive Technology product for their needs and then sourcing that product at the best price possible!

Our team works hard to stay up to date on the ever changing industry. As new products become available we educate our customers and assist them in

determining if the product would be beneficial for them. We proudly work with people in all different areas of need, from Education, Government, Corporate and Individual users. This diversity has really increased our knowledge of what works and we are able to pass that on to YOU!

This month we are excited to feature the SmartEdPad by SPED K12! The SmartEdPad is a simple, dedicated and collaborative solution for Special Education presented in a tablet format.

SPED K12 has preloaded the SmartEdPad with over one hundred special education applications, organized into fifteen categories focusing on a broad range of skills. New apps are added on a regular basis and the apps are previewed and recommended by a panel of practitioners for use with students who have special needs. Additionally, users can search for, choose and load more apps and place them in the available categories.

Some of the exciting key features of the SmartEdPad:

- Personalized Learning Environment for Each Student
- Collaborative Learning Made Easy
- Track Student Performance
- Integrated with existing Learning Management Systems
- Tablet or Software Solutions available

For more information on the SmartEdPad and if this solution is right for your students please call Amy Perron at 952-278-0559 or email at amy.perron@cadan.com
