Proven Mathematics Success for Students with Disabilities

Equals Mathematics is the only curriculum with proven results in an independent study for students with mild, moderate, and severe/profound disabilities. The completion of a recent three-year study demonstrated significant progress with no regression across three years with the same group of students and two additional groups of students. Developed with general education best practice math methodologies and differentiation, Equals Math provides students with foundational skill instruction in all Content and Process areas. Differentiation embedded in the lessons with an additional guide to meet specific, individual needs assures all students are active learners of math.
